Performance Commentary

May started off on a weak note driven by fears of higher interest rates combined with a worsening Covid situation in China and earnings misses from some of the largest US consumer and tech companies. Stocks then made a strong recovery towards the end of the month following signs of inflation peaking and hopes of China re-opening. Despite this turmoil, SKAGEN Vekst had a strong month, delivering a solid absolute return and comfortably beating its benchmark index. The strong performance was mainly driven by our energy-related companies such as Bonheur, Shell, and CNOOC, which benefited from continued high oil, gas, and electricity prices. Shell also reported numbers in May that ticked all the key boxes of our investment thesis: free cash flow is growing, debt is going down, while dividends and buy-backs are moving north. On the negative side, the Danish pharma company Novo Nordisk had a difficult month despite the data illustrating the continued strong growth of its new products, such as Ozempic. In the current environment, we continue to favour companies that should perform well in an environment of higher inflation and interest rates – such as financial and energy-related companies.
